

Principal Letter:

Students use a program that helps them learn their math facts called FASTTMath while in school. This program has only been available when using a school computer. We are piloting FASTTMath use through a web-connected computer away from school. If you have a web-connected computer at home, please help your student get connected to FASTTMath. You can follow these instructions from any web-connected computer; for example, at the Dedham Public Library.

Attached is a copy of "Accessing FASTT Math Using Webnetwork." These instructions contain information to access Dedham's cloud, Webnetwork. From this site, FASTTMath may be entered through Foxfire (the recommended browser), Safari, or Chrome. The attached document also includes instructions to install Adobe Flash Player (required for FASTTMath).

If you need assistance to access FASTTMath from home, technology home support is available by emailing hometechservice@dedham.k12.ma.us. The first step in making this pilot successful is parent support. Please help us to continue our quest to bring 21st century teaching to the students of Dedham.
